

JBL PRONOVO BEL GRANO M

NEW

Granulated staple food M for all 8-20 cm orn. fish

Suitable for: 

1cm

- Prebiotic, sinking aquarium fish food: dedicated dietary fibres in the food supply the beneficial intestinal bacteria with food for a healthy digestion
- Natural raw ingredients without artificial additives for a natural diet and healthy aquarium fish. Tested on JBL research expeditions in the tropics
- Very high acceptance even in choosy fish species thanks to high-quality raw ingredients such as salmon, squid, shrimps and garlic
- With the very high-quality natural astaxanthin from krill and spirulina, which ensures perfect colour formation in ornamental fish
- Package contents: original sealed, air- and light-tight, recyclable tin with dosing aid in the lid as a feeding aid

JBL PRONOVO BEL GRANO M

Product information

In community aquariums with different species of fish, the ornamental fish kept will have different demands on the food. JBL PRONOVO BEL takes the different feeding types into account and offers your fish a wide variety and choice for a natural and healthy diet. If you wish to further enhance the range of foods available, you can supplement the staple food JBL PRONOVO BEL with other foods from our JBL species concept and with treats.

The biological species concept for ornamental fish: In addition to a staple food such as JBL PRONOVO BEL for community aquariums, your fish can also be fed with foods from the JBL PRONOVO species concept. Within the species concept, you can add food ideally suitable for particular fish species or select alternatives for the main food. It's no problem if, for example, your fighting fish also eats the food for your barbels and vice versa. It is only important that you offer the right food for each group of fish. Variety is always a good thing!

Do you want to be sure you are feeding your neons, armored catfish and others exactly the right food? No problem: in the JBL species concept you will find a bite-sized granulate for neons (and other small characins) whose composition is precisely adapted to the needs of the fish and includes insects: the JBL PRONOVO NEON. In their natural habitats in South America, neons live in very nutrient-poor blackwater biotopes and are dependent on small bite-sized plankton. Armored catfish, on the other hand, live on the ground and have a different food spectrum. The JBL PRONOVO CORYDORAS (Corydoras = scientific name of the armored catfish genera) contains the appropriate raw materials, such as shrimps and spirulina. Armored catfish need a varied diet for healthy nutrition. Shrimps are representative of all small animal organisms including carrion, which the armored catfish feel on the ground with their barbels.
